Dear Hiring Manager,

I am seeking a position as Director of Product Security which will utilize my collective experience in product, application, and cloud security, SecDevOps, information security, regulatory compliance, management, and software development. I would like to build and manage another product/application security team as I did at both Intel and McAfee.

I am fluent in both business and technology. I started my career coding enterprise security software solutions (Dev), then transitioned to interfacing with customers and convincing engineers what to build (PM), and finally focused on securing products and enterprise solutions in IT Operational, Public Cloud, and DevSecOps environments.

As a people manager, I have directly managed teams of 16 engineers, 16 directors, and satellite teams of 120+ security architects located worldwide. I am willing to travel up to 30% of the time and have successfully telecommuted for many years.

As a security architect, I have all the proper certifications, am knowledgeable on all the security standards and regulations, am familiar with many product and IT security tools, and regularly use AWS, common operating systems, and network technologies. I frequently mentor security architects on the Security Development Lifecycle (SDL) and conduct security architecture reviews and threat modelling.

I have an MS degree in Electrical and Computer Engineering. I am working towards my PhD in Applied Mathematics. I am writing a book on the Agile SDL and the Product Security Maturity Model. As a finisher, I have run 100+ marathons and ultras in the past 7 years, including two 100-mile trail runs. My [CliftonStrengths](#) top 5 talents are: Strategic, Learner, Achiever, Relator, and Discipline.

I feel I could hit the ground running as a Director of Product Security or Senior Product Security Architect within your organization. Please consider me seriously for this position. I look forward to hearing back from you soon.

With my best regards,

Harold Toomey
